

Amazon Sales Performance Review

Strategic Insights & Growth Opportunities

Executive Summary

₹78.5M

Total Revenue

Analyzed across platform

116K+

Distinct Orders

Processed through the period

₹701

B2B AOV

Average order value vs. B2C ₹648

58%

Medium Value

Share of total revenue

B2C volume dominates total orders, but B2B demonstrates higher per-order revenue potential. Medium-value orders form the revenue foundation, requiring strategic balance between volume and value optimization.

Customer Purchasing Behavior

Single-Item Basket Pattern

Average basket size remains stubbornly fixed at **1.0 item per order** across all apparel categories and promotional campaigns. This represents a significant opportunity to increase average order value through strategic bundling and upsell tactics.

Premium Shipping Preference

Customers overwhelmingly select Expedited shipping for **82,000 orders** versus 38,000 Standard shipments. Expedited customers also demonstrate higher average spending per order.

The April Volume Anomaly

1

Explosive Growth

April 2022 promotional strategy drove **46,000+ distinct orders**, representing unprecedented volume spike

2

Immediate Drop-off

Surge followed by sharp decline in May and June as momentum failed to sustain

3

Key Insight

Strategy successfully acquired one-time deal-hunters but failed to convert them into loyal, returning customers

Operations & Logistics Challenges

Geographic Concentration Risk

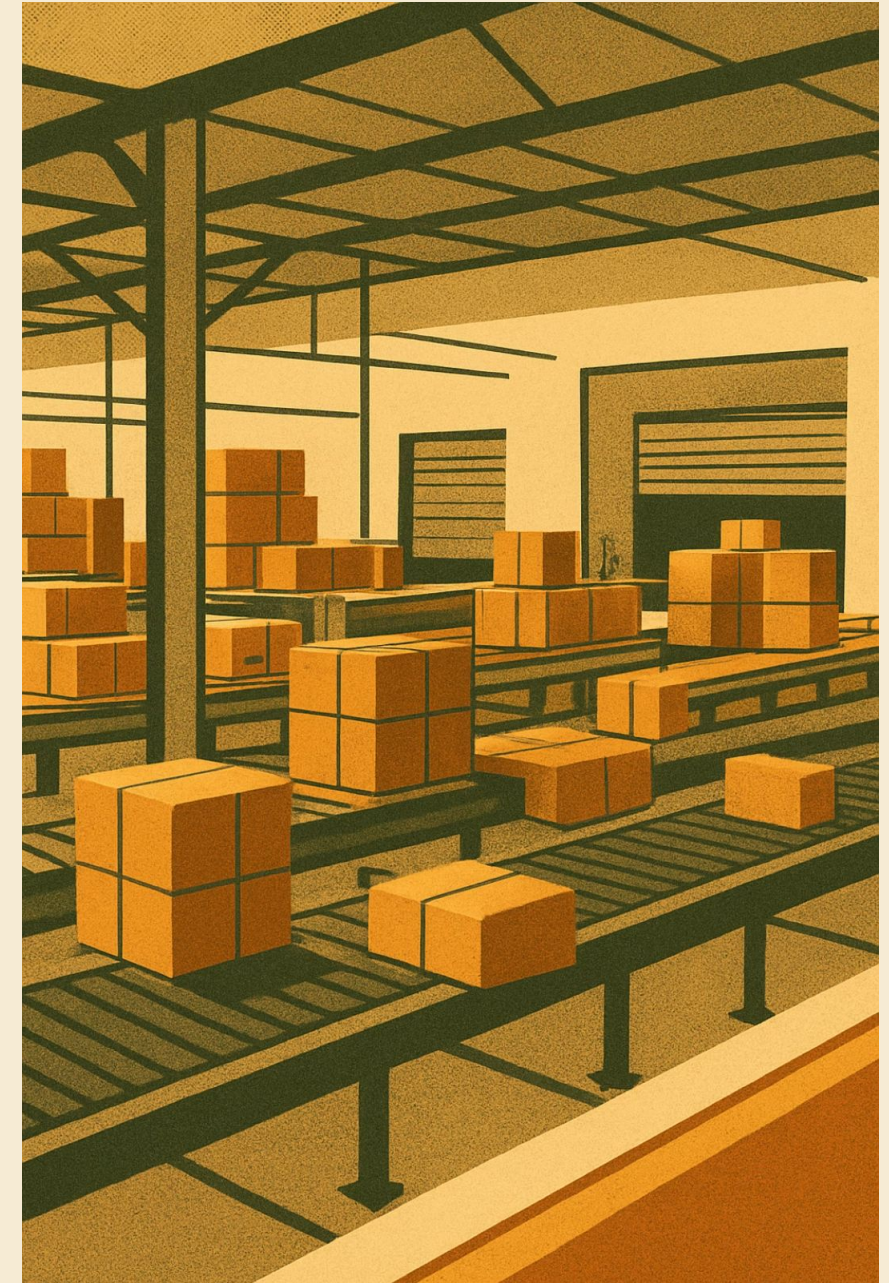

Revenue highly localized and vulnerable to regional disruptions. In top-performing Karnataka, **single city generates 65.35% of regional revenue**, creating significant concentration risk.

Fulfillment Reliability Gap

Merchant-fulfilled: **13.68% cancellation rate**

Amazon-fulfilled: **6.73% cancellation rate**

- Lost revenue opportunity from merchant cancellations

Inventory Inefficiencies

Dead Weight Stock

Specific apparel sizes (4XL, 5XL, 6XL, Free size) consistently rank at bottom for total revenue generated

Storage Cost Impact

Continuing to manufacture and store low-performing sizes ties up valuable warehouse space

Profitability Drag

Underperforming inventory drags down overall operational profitability metrics

Strategic Action Plan

01

Implement Checkout Bundling

Introduce "Complete the Look" or "Buy 2, Get 10% Off" promotions to break single-item basket trend and increase cart value

03

Audit Merchant Supply Chains

Shift more inventory to Amazon Fulfillment (FBA) networks to cut 13% merchant cancellation rate and recapture lost sales

02

Incentivize Premium Shipping

Test "Free Expedited Shipping on Orders Over ₹1,000" threshold to naturally push customers to add second item

04

Liquidate Underperforming Sizes

Halt production on bottom-tier sizes and apply aggressive discounts to clear existing warehouse stock
